

# SOLID STATE RELAYS

with

**DIRECT COPPER BONDED TECHNOLOGY  
PLANAR GLASS PASSIVATED CHIPS**

Current Ratings: 40 - 205 AMPS

Blocking Voltage: upto 1800 Volts

**registered, E197669**

Weight = 146 g

The SSR output is a back to back SCR configuration ( two SCRs are connected antiparallel). These are direct copper bonded planar glass passivated thyristor chips. The DCBs offer very unique advantages like:

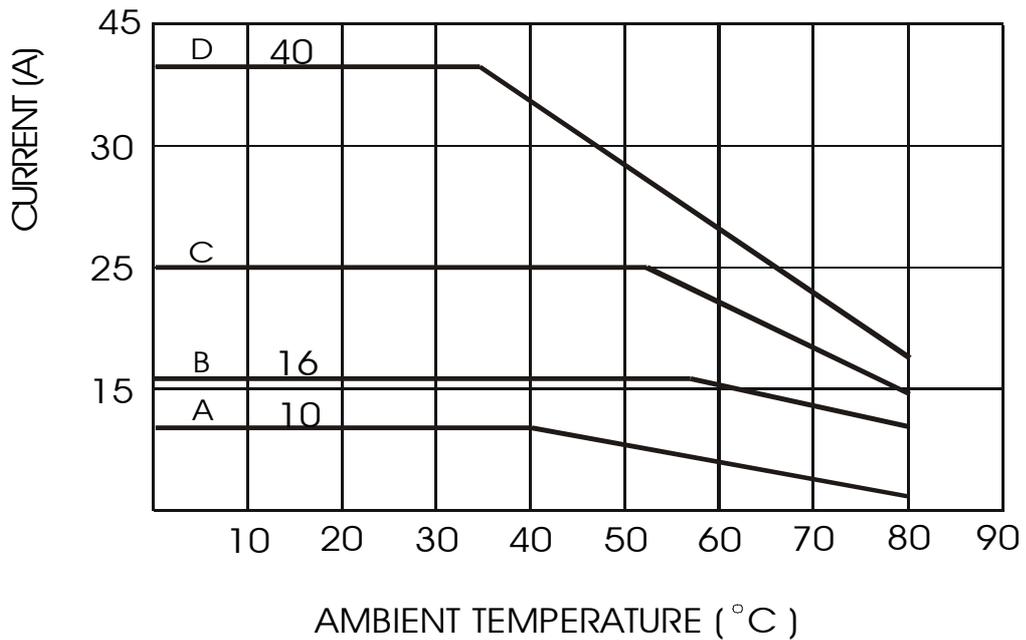

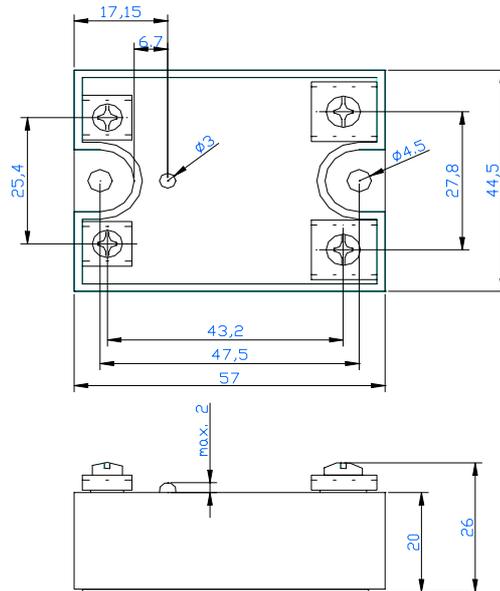

- Much higher load cycle resistance due to very strong mechanical interconnection between copper and ceramic
- Lower thermal coefficient of expansion
- Ideal heat spreading without any hot spots
- Higher fusing current
- The life-time of the SSR is 10 to power of 9 load switchings compared to the 10 to the power of 6 mechanical switchings for an electromechanical relay
- The SSR features an isolation of 4000 volts (I/P and O/P) and 1500 volts between chassis and the terminals
- The I/P control is compatible to TTL logic ( AC I/P control also available for control panel application)
- The I/P control is protected against reverse polarity
- Available in single and three phase versions
- Same casing right from 10-175 Amps and conformed to ``UL `` standards
- Safety cover available to protect against live terminals
- LED is standard

Main applications for SSRs are M/C Tools, SPMs (SPL. Purpose M/Cs), Process Control Equipments, Traffic Controls, Vending M/Cs, Heating Applications, Textile Industries, Microprocessed Based Systems and Food Industry.
